Essay

Roll	No		

### ESSAY.

Time Allowed: 3 lirs.

Max. Marks: 250

#### Instructions to Candidate

- Both sections are compulsory.
- · Attempt one essay from each section.
- · Each essay carries 125 marks.
- Write each essay in about 1000-1200 words.
- After finishing the first essay, attempt the next on a fresh Page.
- Any page left blank in the answer-book must be crossed out clearly.

(Examiner will pay special attention to the candidate's grasp of his/her material, its relevance to the subject chosen, and to his/her ability to think constructively and to present his/her ideas concisely, logically and effectively).

#### SECTION - A

- 1. Many men go fishing all of their lives without knowing that it is not fish they are after.
- 2. The material world is simply an expression of the mind.
- 3. The higher we are placed, the more humbly we should walk.
- 4. Sports and Competition do not build character; they reveal it.

#### SECTION - B

- 1. Consumerism kills culture with overproduction and heightened sense of need, established by the marketing.
- 2. In the era of post truth fact depends entirely on the power of man who can fabricate it.
- 3. People 'over-produce' pollution because they are not paying for the costs of dealing with it.
- 4. There are not enough jails, not enough police, not enough courts to enforce a law not supported by the people.

Material woold is simply an Expression

Material woold simply refers

to the external conditions of

human life. These conditions

juffuence human existence and

shapes the way an individual

exists and survives in ruis

woold. These conditions are

theigh and object affactment

to life, livelihood, desires and

passions for different things etc.

Mend defens to our enternel mental faculties which help in our cognistions of their world. So it is generally said qual our world is shaped by our mental attitudes

our perceptions og puis world, gives us the nature and form of this material world.

It is generally solieved that everything in the world is dependent on our perceptions and attitudes, when me have postine outlook towerds thengs and beings of the woold, then we perceine nothing but the happeness all coround. And. when we become sad or anguished, then we e see nothing sul- pains, choos and sufferings in the world. Therefere, it is said that

therefere, it is said that everything passes thorough see

lenses of our hental faculties. Theirs have only those fooms and appearances what we are willings to look for, from Buddha to Gaudhiji, everybody said you become what you their. These, by extension, means your world is shaped by your thoughts. This world can be material or sportful.

However, there are also other- freight than our frongers. we are also externally conditioned. Extraneous conditions many times force us to their the way we are not willing to their the way we are not willing to their forces. These conditions like Social sinks such as Violence,

trapes, arison, dishonesty, etc.
compel us to perceive une
material world through skeptsz
or even negative outlook.

we do not always lee good and noble brings in the world. we also feel · flat there are many things which should have notwe thenk so not ceursted. we are steptoc because about world, but simply because me are Deeply enfluenced by these expansions And all these factors. combinedly makes a completelife.

- lhengs semply by saying

there exist no such things, it is only because of your pessionistic point of reiew that you passeine this material world like this.

So, It can be said that naterial world is though expressess of our ried, butalso has a lot to do cerith other external factors as well, And notably, these factors are beyond our control. we can't control each and every thengs owing to our finite and limited character, These thengs have been en existence since time funiemoral and will continue to exist

till civilisations cercist and time

Yes, it is true - that we create our own own world in our own imagination. But we always find one or other obstacles in our path to realize our own imagined world. It is simply because our survival is conditioned, both internally and externally.

It is also tree thatmany achieve what they
desire but it does notmean that they achieve
their desires absolutely and
unconditionally, we can nothave anything whatsoever
we desire in this world.

be expire for mose money, wealth, sig bindows, lucurious lite, social prestige 4 stature etc. we keep on adding such unbridled desires to over their way we create our maderial world through our thought.

But, some People always have in sueir mend to beind peace, happeners, harmony in life. So they never look for familient pleasure happener have aspike for fore bliss which can satisfe their desires. In their way such people coeste their material world where

pleasurable satisfy their "greed" for happines.

Indeed, the it is worthingent upon individuals mind to look what he needs or desires in this world, for example-Buddha looked for peace and bliss, which he found through changing his point of leven forward the world, fandhiji also looked for fouth and ·non-violence so he perceive this world through these lenses. They say, wooded in people by their heart are very good creatures, yet - Mey said world is full of suffering this clearly shows - had-

despite their possible attoinde towards the climenation of sufferings, they accepted their we are intertwind and inexpicately linked to the socio-economic and other buch Corditions.

on lie other hand, there are hedonists cono say only pleasure is the Summum bonum of life, so they see everything in this world in form of pleasurable objects. They always for to find pleasure in every of condition.

Similarly, Hobbs and Machiavelli showed the world as unruly, selfish, and Selb-Contric, so - every said people

always try to maximise their benefits and act-out of their verted interests.

All, of the assence illustrations points towards one thing, that all were parhally signer en their afformations but none can claim - that they are assolutely correct in dueis peceptions about naterial world. H is so seeause this is one point og telew . so their perceived word. is different form owns, this Heel shows and our world is enherently enusedded in our thenking Boren and mental attofudes But there are many things

which Mapes our thenking

foocess itselb, like foverty, injustral cultural brackses etc. when in Africa people are dying of Starvation and hunger, now can we say that 14's Inst because of our thoughts.

similarity, injustice which is killing hundreds of thousands people in Syria will shape we world of syrians accordingly. Cultural practices like fatrianchy, emboldens our belief shal- women should always play second fiddle to man. cultures which supports consumerisms and materialisms shape the outlook of people in bedonism.

So, we can say liat, brom about analysis, that we are socially + economically

Conditioned "force" beings, pre do have freedom to shape and form our own material world but it is difficult, it not impossible, to do so. we, common men (women can not bose ownselves berom all external influences and make our world.

but, we can hold-knot by though we are such soft of things, we all such soft of things, we can perceive them in positive light having sanguine standpoint about life and world this way we will see this world this way he will see this world beautiful and liveable and airoid personists fendencies. Ulbimately-this material world is simply the expressions of our mental altitude toward

r leople 'over-produce' pollution secause they are not paying box ene costs of dealing with it?

pollution simply orefers to

the Contamination of the postine

emissonment, when pollution

goes beyond the Carrying

Capacity of Emissonment, then

it can be called "over-production

of pollution Cost of thes locial,

economical, emissonmental, healthharaards etc. Despite these heavy

Costs we are under illusion

that we don't pay Costs of

over-production of pollution

sources like exploitation of natural resources in an indigenimal manner, by snoksteet endustries, vehicles, high decisel sound systems,

release of Effluents into Streams and Fivers rete. These causes air pollutions, wester pollution, noise pollution, global wearing receding of placiess, acid ficality of seas etc.

People' thenk that they do not Pay for causing pollution so they pollede the emissonment But, why do we think so? It can be answered by observing our enmediate inferestr we generally restort ourselves to our immediate interests and monetary benefit. From thes perspective it seems as it we do not pay a single penny diserty for causing pollution. when there were - some

charges bor pa causing pollution

then we would have cospainly

thought sefore causing pollution.

But it is not true that

we are not paying any

costs. In fact costs are very

heavy, though indired— and

in long-term as well as in short
term.

By over production of pollution, mankind has disturbed very harmony in the environmental conditions. Now, we are conditions. Now, we are contitions distorted patterns of rains, morrooms, encreased brequency and intensity of natural calamities and disasters like cloudswists, bloods, droughts etc. In these exigencies thousands of lives are lost and there is loss of proporties worth thousands fixed.

Next, this ementainable development is causing severe stress in thriving of siondiversity many species of those and fauna are at the brink of extinction. Many of these are important from medical prosposes, and stability of ecosystem itself.

environment leads to economic losses, when we don't have enough ensources left aght after over-exploitation, their how can we produce what we need in future? This is highly unsustainable, Economic costs of Pollution are very light.

Seeause of lack of resources, societies become turnultuous and turnoil takes into the life of Cocieties. This restlessness impense on Social harmony, peace and cohesion ex.

So, we can't lo courselfes par all the above discussed losses of emisonment, economy, social peace, not costs that we are will be paying?

Furthernisse, air pollution is causing serious prespicatory allments like althma, noise pollution is causing disturbances in our life 4 auditory diseases, cisater pollutions has made trivers, streams and seas poisonous and creating serious prostems of dequals drinking water 4 availability of

clear weather box other daily uses.

Are these not costs which
we are will be paying?

Moscover, due lo pollution og goeen house gases entire climate has seen distrocked. Now we are copping with glosal warning, rollies has put the world respecially island nations & coastal areas at risk, receding a bast melting glaces etc. Ozone-depleting substances like CFCs, MFCs, halons etc. have caused oxone-hole which will cause Serious Spin diseases and earners etc. Are these not Costs being paid by th?

Now, impossant and nost protonent question so despote knowing so heavy costs that we are paying or our future generations will be paying, why are we over polluting over envisorment?

Answer of this question may lie in myopic vision of human beings, self- interest , and indicat nature of these costs, lack of awareness of consequences of Clinate change and emissionmental degradation etc.

people of trecent times have not been coilling to theink beyond themselves. They think that maximization of interests which beings pleasure to them is the sole objective of their life. They have been of the opinios that everything in this world is

for human pleasure and happeires. so they bocus more con Consumerisms and maderialis these are the causes of authropoceuhre attrides of life they have secome so self-centric that they do not heed warnings - majif we go by the same pace In exploiting resources, there would be acute scarcily of resources un our life Heub even to neet our genuine needs, let alone futive generations. All are engrossed in acquiring more and more material things + wealth, Also, people don't lay discetly for causing pollution, so don't gine a dann to this. if they had to Pay book in teams money, they would be

prose cautions in over-explosations of fimited resources.

Now, next- question vieres how can we stop this indisvriminate and highly unsustainable way of explostation of national resources which causes over-follutions? This can be done by directly imposing taxes bines etc. on People who over tollet emsonment, generating more avarieness storydeterimental effects of pollution, by inculating mosal values of self- control, temperance, and responsibility of taking care of needs of butwer generations etc.

various government like .

Indian government, have imposed coal cess etc. to reduce the wastage of resources and to cut pollution thereby. Almost

all nations have made pledges to cut their emissions to control pollution levels. world has come together to grapple with the climate change and emisonmental degradation, world has adopted sustainable pevelopust Goals, paris Agreement, kigali Agreement, montreal Botocol etc., to cope with this merace.

adapting of technologies like nanotechnology which reduces the consumption of resources to a significant level, biotech which helps in preserving bio-directly and involvable resources, world is shifting from Pollulian causing methods of power generation to cheaner and greener buels like fremewable energy such as

Solar power, wind fower, etc.

There is an urgent-need

to stop hie competition between

nations of among people, bor greedy

material upliffment-. Societies should

emphasise more on values of

conservations and brugality to

save resources and durindles

pollution levels.

that pollution levels have already crossed the threshold limite and now we are putting ourselves for purcessingly more and more precarious strations. This will be very disastrous and counter-productive if we continue with the same life-stayles.

ourselves to be swept away by our rapacions and greedy interests. we have to come forward and take responsibility to prevent any further erosion of emissonment by over roduction of follution.

leave behind ownselves what we inherited from own over bosefathors, if we are able to do so, only then, butwee generations can meet their all needs to as to develop their fullest de personality and line a happymans life. So we have no moral migut to leave suivers poisonous, air severely contaminated and

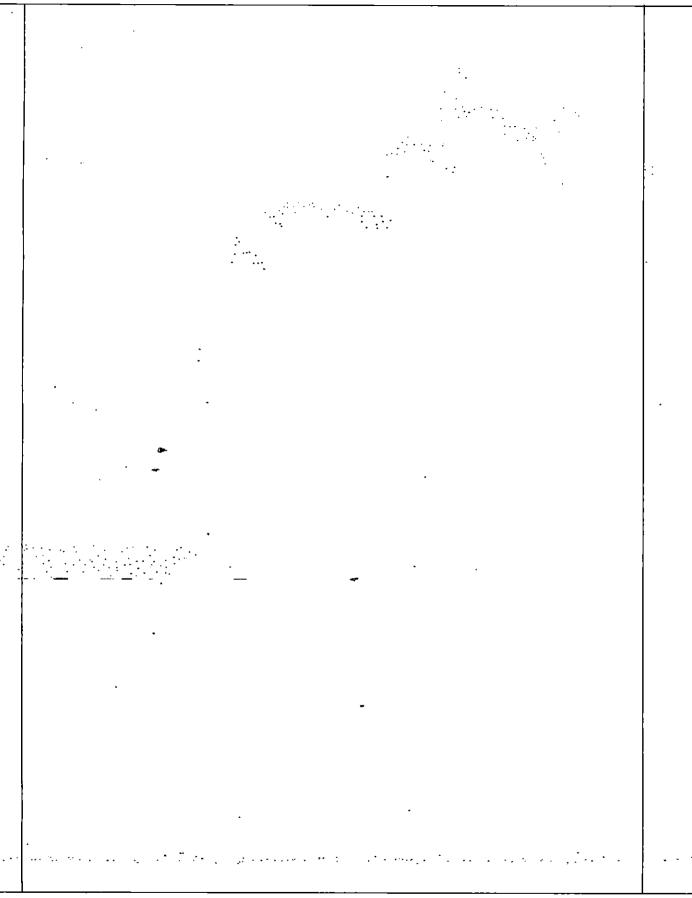

GS SCORE heated beyond limbs the woold ve. Hobally
