

GS SCORE

ESSAY MOCK TEST - 1

Roll No. _____

Time Allowed: 3 Hrs.

Max. Marks: 250

Instructions to Candidate

- Both sections are compulsory.
- Attempt one essay from each section.
- Each essay carries 125 marks.
- Write each essay in about 1000-1200 words.
- After finishing the first essay, attempt the next on a fresh Page.
- Any page left blank in the answer-book must be crossed out clearly.

(Examiner will pay special attention to the candidate's grasp of his/her material, its relevance to the subject chosen, and to his/her ability to think constructively and to present his/her ideas concisely, logically and effectively).

SECTION - A

1. ✓ *When we cannot make life better on earth, what is the guarantee that dreaming about flying cars, humanoid robots and populated cities on Mars would make it any better*
2. *Man's emotions are the slaves to his thoughts, and he is the slave to his emotions*
3. *The greatest dishonesty is when our insides don't match up with our outsides*
4. *Winning isn't everything, it's the only thing*

SECTION - B

1. *Privatization is not always the best economic policy*
2. *Urbanization is not only simply expanding the area of cities*
3. *Inequality is a poison that is destroying livelihoods, dignity, peace, and amity*
4. ✓ *No matter where you stand politically, it is important that you should participate in the process of politics*

Section A

When we cannot make life better on earth, what is the guarantee that dreaming about flying cars, humanoid robots and populated cities on Mars would make it any better.

The year 1996 was a watershed moment in the field of technological advancements. The reigning chess grandmaster Garry Kasparov was defeated by the IBM DeepBlue's Chess Program. This was not merely a fluke in the game of The Man vs. The Machine. This event heralded the age where man was not the only 'sapient' ^{good} (human intelligence). Human intelligence came ^{into} to be challenged by the intelligence of the ^{captured} machine that is, Artificial Intelligence. ^{the human technology relationship, which is the core of the question}

Intelligence in man emerged throughout

the evolutionary process. With the aim to live a better life, man applied his evolved intelligence to create science and technology. The purpose of technology is to make life easier for man. It ~~serve~~ the purpose of making Earth a better home for man to live.

Good point about science curiously improving life...

Man's journey on Earth began with the urge of survival. This led him to use his limited intelligence to innovate and invent fire, develop languages for communication. This can be called as the Cognitive Revolution as called by Yuvraj Nath Harari in his book "Sapiens". In order to make life a little ~~more~~ better, man developed agriculture, villages. This gave him security under the Agriculture Revolution. Around 300 years ago, man again got a new idea of better life. This led to the Industrial Revolution. This was a permanent revolution in terms of ^{how} humans live, work, eat and communicate.

However, the urge to innovate, develop newer and better technologies did not stop at the Industrial Revolution. Today, one can see the emergence of Industrial Revolution 4.0. While the earlier industrial revolution was based on making the machines, the I.R.4.0 of present is based on 'learning by machines'. This new revolution in technology has turned out to be disruptive. It has fundamentally changed our thoughts, ideas and beliefs of a good life.

In this Age of Disruption, the disruptive technology has made life better for human in numerous ways. Man today is looking for the 'elixir of life' just like the Greek King Gilgamesh. The use of bionic technology, gene editing and cell regenerative technology is aimed at pushing the boundaries of man's mortality.

Disruption is not just limited to man's mortal existence alone but can be seen all around

what about prominent problems like poverty or social issues? Can technology solve all problems?

him. The emergence of seamless travel through self-driven cars, hyperloops have increased man's bandwidth of engagement in the not-so-small world. Today man is expanding his wings ^{not only} on Earth, but one can see his flight to the outerspace. Given the scale and nature of advancements, it is nobody's case, that man in the coming years will start settling on the Moon and even Mars.

The topic questions the importance of such advancement.

Tackle that.

While going to Mars still has some time left, at present one can witness technology has entered into our lives in multiple ways - social media, blockchain technology, robotics and what not. However, Stephen Hawking states that while the present disruptive technology can be the best thing that can ever happen to humanity, but it can also turn out to be the worst thing to happen to humanity.

This redundancy of man will the Internet of Things (IOT) into the Internet of All things. The danger of this "decoupling" of man's sentience (how one feels) and the machine's sapience (how one solves) has been expressed by many technology pioneers like Hawking, Bill Gates, Elon Musk. Once Hawking was asked that if ever the machine becomes more intelligent than man then man can pull the plug. To this Hawking replied, 'Man asked the computer "Who is God?"', the computer replied "Now there is one" and deleted the plug?'

The machine deleting its own plug surely is a possibility. But man too has take his own share of blame. In the future probably, the machine may try to act as God, but at present, it man who is trying to shun his existence as, ~~the~~ just a 'wise man' (Homo Sapiens) and trying to assert himself as the 'God man' (Homo Deus).

In the present scenario, man is going for the unbridled use of technology and is trying to assert his identity as 'Homo Deus'. But this new identity of man is taking him further away from the life of goodness, virtue and excellence. The cynical use of social media for bullying, rumour mongering shows the unchecked use of technology.

This shows at present, the problem is not just that the machines may become 'super-intelligent' in future, but also the machines are 'super-obedient' at present. They lack the ability to judge man's use of it based on moral standards. This can be explained by the instance of a future possibility of machine-based warfare. Sam L. Marshall in his work "Men against Fire" opined that less than one in four soldiers opened fire during World War Two. With the use of machine-based warfare, this question of inefficiency in the battlefield will never arise.

Remarks For the last 5 pages you've only discussed one argument, i.e., merits and demerits of futuristic technology. Explore more aspects

However, one can begin to question to whether following the dry codes of military conduct is more important than reducing the rate of casualty in such cases.

Along with intelligent machines in warfare, an emerging use of intelligent technology is the analysis of big data by present-day governments. In the hands of a benign government, such big data analytical tools can do great good and can make life better for millions as seen in the case of India's Aadhaar project. However, in the hands of a not-very people-oriented ruler in the future, there is surely a case for the emergence of Orwellian surveillance. The "Big Brother" will be monitor one's life not only externally but also monitor one's inner experiences by using a device as simple as a biometric wristband.

Stick to the question. Examine if tech has solved our existing problems before delving

Remarks into the future. Can tech solve all our problems? Has it done anything to make life better? Are humans to blame for not using tech well?

This shows that in our quest for a better life we have opened newer gates but the keys to lock them is not just with ~~us~~^{us}. The 'machine sapien' too possesses that key. This brings in the question that if we have not still unlocked the gate of the better life then where is the gate and how to unlock it. This key to unlock the gate of better life in reality, is to question 'what do we want to want?' rather than 'what do we want?'

In the present age, mankind's sole focus has been to accumulate the things he/she wants. This has made man no better than a machine. Today, there is better focus on enhancing man's cognitive abilities rather than investing on one minute quality of man which can lead him to a better life and reduce the possibility of machine outwitting man. This is the quality of wisdom. Wisdom is derived from our consciousness.

Wisdom questions the 'why' while the static scientific knowledge questions the 'what'. Isaac Asimov points out ~~out~~ to the present state of affairs. In the words of Asimov, "the saddest part of life right now is that today science is developing knowledge faster than society is developing its wisdom." John the Savage in Aldous Huxley's fictional work "Brave New World" too makes the same observation. In Huxley's world, the human race has no pain, only happiness and contentment. This is the ~~pre~~ perfect version of a better life. But John demands consciousness. He demands know wisdom to "be happy as well as unhappy".

In the present 'Brave New World', human race has witnessed a long journey. Human intelligence has evolved much by the natural process of selection. It was due to intelligence

What can be done to improve mankind's health?

man was able to develop technology and respond to change. Change is not just the order of nature and thus, natural, ^{offer suggestion} change is also necessary. This necessity of change forced man to develop fire but then later he also had to develop the fire extinguisher.

In this sense, to make life better in the contemporary times, man developed technologies like AI, Internet of Things and Robotics but all these too will require an extinguisher as a safeguard. In this, man's wisdom will serve as the safeguard.

The present age is the age of a race between the machine: developing its knowledge and the man developing his wisdom. But as one knows, without knowledge, ~~we~~ ^{never} life can be better. In the words of Immanuel Kant, "science is organised knowledge, while wisdom is organised life". Therefore, for better life, it should be our responsibility that wisdom wins.

In-depth analysis
in Part 2A

Section B

No matter where you stand politically, it is important that you should participate in the process of politics.

"The law is the expression of the general will. All citizens have the ^{right to} contribute in person, or through their representatives, to its formation. It is the same for all. All citizens being equal in its eyes..."

- Article 6 of the Declaration of the Rights of Man and Citizen *Good introduction*

The Declaration of the Rights of the Man and the Citizen was given by the French National Constituent Assembly. The Declaration bears the imprints of its times - the French Revolution of 1789. There ~~was~~ a sense of recognition

among the populace in France at that time, that what matters is the participation in the political process. Class - Nobility, clergy or common man is immaterial, what matters is that each and every person irrespective of their class or status is a participant in the governance of France.

The idea of politics traces its origin to the times of Ancient Greece. It is derived from the Greek term 'polis' meaning governance in the Ancient Greek city states. Politics since the earliest times can be referred to as the means of acquiring power. According to Abraham Kaplan, "politics is all about shaping and sharing of power".

The need of yielding power is root in the substance of life of man. Aristotle in

his work "Politics", states that "man by nature, is a political animal". It is the nature of man to be a part of a polis - political community. For Aristotle, politics comes into existence for life and continues for continuous of good life. While earlier man, without a state or political community lived in bewilderment. At present, in a political community man has all avenues to pursuit excellence of life.

In this sense, in quest for a life of excellence, political participation becomes a necessary means. It involves the process when man come together to pool in their powers. This plurality of action provides the means to govern and sustain good life. This participation in politics can be achieved through various mediums. In the modern times, the concept of government, elections, political parties, pressure groups and even social media provide channels of political participation.

In the modern age, the right to vote
is the first one

Even though of utmost necessity, participation
in the process of politics,

In the modern age, the necessity of political participation is not only recognised, but is also provided for by various means. However, this does not guarantee participation in the process of politics.

One of the biggest impediments today in the process of politics is that politics is viewed as the domain of elites. It is only the elite sections that have power like the state, supreme religious leaders. Masses only have a passive role and only have to be obedient towards the political decisions taken by the elites. The Arab Spring in its initial phase was

a sign of this frustration of politics being hijacked by the few powerful.

While in some societies, the masses have no role in political participation, are treated as passive observers, in some other societies, masses serve a symbolic role in political participation. Today the Right to vote is considered as the voice of the masses. But in many instances, the instrument of vote is reduced to merely a symbolic purpose of justifying authoritarian rule. For instance, North Korea does have elections. The turnout is 99% while the winner get 100% votes casted.

Even when people in a society exercise their ~~right~~ right to vote in full earnest and their vote also matters, it is not necessary that the voice and vote of each and every person ~~also~~ matters. That is, the present mode of

political participation and representation ensure that the one with maximum support wins. But it does not ensure that the elected also hear the voice of the minority. This was the case in America in the 19th century.

Alex De Tocqueville in his work "Democracy in America" notes that people had right to vote but democracy was turning ^{"tyranny"} into majority. The rights of the minorities like Blacks did not matter.

Lack of recognition of the voice of the subaltern in the process of participation breeds in intolerance towards diverse views. Participation in politics is aimed at consensus building. Consensus can be ensured by accepting the views of those who differ from us. The historical discrimination faced by the Dalits in India serves as a case in point. The voice of Dalits did not matter in politics. Dr. Ambedkar brought a wind of change.

Remarks

Good understanding of question

In addition, ^{even} if one ensures that all get participation and that their voices matter, but ~~the~~ a pertinent issue arises. Does participation ensure capacity? Even if masses especially the subaltern class participate in huge numbers, their voices won't matter till they have the ~~the~~ capacity to make their voice matter. This was the dilemma faced by Judis in its initial years of Parliamentary governance. The minorities, women, backward sections were represented but due to lack of capacity they came to known as 'back-benchers'.

Despite the innumerable impediments faced by one in the process of political participation, participation in itself is necessary in whatsoever capacity.

Remarks

Political Participation guarantees the dignity of the individual and protects his most fundamental human rights → The Fundamental Rights given under Part III of the Indian Constitution were arrived by the means of consensus among political representatives.

Recognition of the role and rights of citizenship in political participation contributes to citizen centric governance. It is the fundamental means to ensure transparency and accountability of the government of the day. The Second ARC in India recognizes the pivotal role of citizen-centric governance in curbing corruption.

Political participation not only ensures that the government of the day remains clean but also ensures that in future

Good examination of the political participation & its intrinsic values.

could have discussed this segment in the beginning of your essay.

no such government comes to power which is inimical to people interests. Political participation serves as a safeguard against rise of totalitarian regimes and despots. In case of India, the post-Emergency elections corrected the rising ~~the~~ centralising tendencies of the executive and restored democracy. Hannah Arendt, in her seminal work "The Origins of Totalitarianism", opines that lack of recognition of civic sphere over economic sphere by the masses was the cause of rise of Nazism in Germany.

While the possibility of a future despot is improbable, political participation at present ensures that development is granted. Dr. Amartya Sen notes that the

cause of elimination of famines today is the presence of democracy. Participation in politics does not ensure a means of development but also ensures that development is democratic.

In this, it becomes pertinent that to ensure political participation there is a need to widen as well as deepen the channels of democracy. Besides ~~the~~ elections and the traditional institutions of politics like political parties, there is also a need to strengthen the politics of pressure groups and social movements. The Gender Rights Movements and the LGBT movement have been successful in bringing to fore the voices of the neglected sections. There is also a need to explore and strengthen the newer means of voicing of one's

political views like social media. However, the most significant role is that of the state. The state needs to provide a non-coercive civic space which guarantees political actions. It also has a role in providing capacity building by investing in human development.

In the present times, development is considered the primary concern. In this, participation in politics serves the means to foster development. It is through pluralism, political participation ensures prosperity. This was recognised by the Constitution makers of India. For them, participation of masses in the process of politics in India was not an end in itself.

Participation by masses was a means to ensure development, social justice and equity. This vision is best represented in India's Preamble:

"We, the People of India, having solemnly resolved to constitute India into a sovereign, socialist, secular, democratic republic....

and give to ourselves this Constitution"

-
-
- Good understanding of question
 - Explored multiple dimensions like value of participation, what is politics, how some regimes restrict political participation etc.
 - Could explain negative consequences of not participate
 - ↳ Problems that exist from it. For example different social groups competing for the same resources.

Remarks

+

- Essay; light on content. You will emphasize on only one aspect, that of exploring various proposed innovations.
 - ↳ Did not tackle technology's ability to improve all our problems.
 - ↳ Tech can't solve all our ethical, moral problems. So we need to realize Tech's limitations and not rely too much on it.
 - ↳ mention tech's benefits in the early part of your essay.
- Offer suggestions
 - ↳ Resources, including technological know-how, should be more inclusive and accessible to the public.
 - ↳ Our problems, like technology, are man-made and need to be solved through human effort itself.
